Abubaker

Full-Stack Software & Platform Engineer

abubakerajazz@gmail.com | (+92) 303 9620098 | Islamabad, Pakistan | linkedin.com/in/aubakerzzz | github.com/Aubakerzzz

1 **APPLICATION** — React · Node · Flask · Java · ASP.NET → 2 **DATA** — PostgreSQL · SQL Server · Oracle · Airflow → 3 **PLATFORM** — Docker · K8s · Terraform · CI/CD · AWS

SKILLS

Full-Stack & Languages

Python | Java | JavaScript | ASP.NET | MERN Stack | Flask | Supabase | REST APIs | YAML

Databases & Administration

PostgreSQL | Oracle | MySQL | SQL Server | Query Optimization | Indexing | Performance Tuning | pg_dump | RMAN

Data & MLOps

Airflow (ETL) | DVC | Tableau | Power BI | Data Mining | ML Models | Model Serving | Prometheus | Grafana

Cloud & Infrastructure

AWS | EC2 | S3 | IAM | VPC | EKS | ECR | RDS | Lambda | CloudWatch | SageMaker

DevOps & IaC

Terraform | CloudFormation | Jenkins | GitHub Actions | Docker | Kubernetes | Helm | Bash | Trivy | SonarQube

EDUCATION

BS Computer Science

FAST-National University of Computer and Emerging Sciences, Islamabad

09/2021 – 06/2026 · CGPA 2.97/4.00

Coursework: Database Systems, MLOps, DevOps, Cloud Computing (AWS), Data Mining, Deep Learning, Parallel & Distributed Computing, AI

SUMMARY

Engineer who owns the whole delivery lifecycle: builds the **web application and REST APIs**, designs and tunes the **database and analytics layer** beneath them, then ships the entire stack as containers on **Kubernetes**, provisioned with **Terraform** and released through **CI/CD on AWS**. Experience spans Salesforce DevOps, .NET / React / Angular engineering, and 20+ freelance client projects, backed by hands-on database administration, MLOps pipelines and security-gated deployments.

EXPERIENCE

Salesforce DevOps Engineer — 07/2024 – 09/2024

Fusion Systems and Services Inc · Chicago, United States · Full-Time

- Contributed to Salesforce DevOps by developing **ITAS**, a custom deployment tool similar to Copado, to strengthen deployment and automation processes.

.NET, React & Angular Engineer — 01/2024 – 02/2024

Xphyre, Inc. · Houston, Texas, United States

- Worked as a .NET, React and Angular engineer on web application development.
- Delivered Shopify and HTML / CSS / JavaScript full-stack work.

React (Game) Developer — Intern — 03/2023 – 05/2023

Grayhat · Islamabad, Pakistan · Full-Time

- Developed React-based game features as a full-time intern.

Full-Stack Engineer — Freelance — 04/2021 – Present

Freelance · United States, Australia & Europe · Part-Time

- Completed **20+ client projects** across the United States, Australia and Europe as a full-stack engineer.

PROJECTS

GenAI Application with End-to-End MLOps — APP | DATA | PLATFORM

AWS EKS · SageMaker · Docker · Kubernetes · Terraform · DVC · Airflow · REST

- Delivered a GenAI application from raw data to monitored production, as measured by a fully versioned and reproducible lifecycle, by designing DVC and Airflow model pipelines and serving the model through REST APIs behind a web interface.
- Made every environment rebuildable from a single script, as measured by zero manual console steps, by containerizing services with Docker, orchestrating them on AWS EKS, and provisioning all infrastructure with Terraform.
- Kept the model observable after release, by wiring CI/CD deployment with Prometheus and Grafana monitoring of service and model health.

Netflix Clone — Full-Stack + DevOps Pipeline — APP | PLATFORM

MERN · Flask · Jenkins · GitHub Actions · Trivy · SonarQube · Docker · Kubernetes · AWS

- Automated delivery of a full-stack streaming web app, as measured by every frontend or backend commit triggering the pipeline with no manual handoff, by connecting GitHub to Jenkins and GitHub Actions workflows that build, test and push container images.
- Shifted security left, as measured by scans gating each release, by running SonarQube static analysis and Trivy image scanning before deployment.
- Delivered identical dev-to-prod environments, by deploying containerized instances to AWS on Kubernetes provisioned through Terraform.

ITAS — Test Automation & Analytics Dashboard

DATA APP

SQL · Relational Modeling · Dashboards · Test Automation

- Scaled a test automation lab, as measured by unified reporting across corporate portals and mobile devices, by building a normalized relational SQL backend for test data collection.
- Turned raw test output into decision-ready metrics, by writing optimized SQL queries, cleaning data structures, and aggregating results into an interactive dashboard.

University Management System (Java)

APP DATA

Java · Relational Database · Role-Based Access · WhatsApp / Notification APIs

- Shipped three role-based portals (Student, Faculty, Admin), as measured by enforced per-role access, by normalizing the schema and implementing role-based database permissions behind Java backend logic.
- Delivered real-time WhatsApp and notification updates to students and faculty, by integrating messaging APIs through database triggers.

Flex Track — Dynamic Flex Management System (ASP.NET)

APP DATA

ASP.NET · SQL Server · Voice Recognition · Speech Synthesis

- Delivered a dynamic, data-driven Flex management website that demonstrates depth in ASP.NET, by building it on a SQL Server backend with tuned queries for responsive dynamic content.
- Made the web application voice-enabled, as measured by hands-free interaction, by integrating voice recognition and speech synthesis into the ASP.NET front end.
